

FNP Sales & Revenue Analytics Dashboard

Project Overview

The FNP (Ferns N Petals) Sales & Revenue Analytics Dashboard is an interactive business intelligence solution developed to provide management with a comprehensive view of sales performance, customer purchasing behavior, delivery efficiency, and revenue trends. The dashboard transforms raw transactional data into actionable insights, enabling stakeholders to make data-driven decisions related to marketing campaigns, inventory planning, customer engagement, and operational performance.

The dashboard consolidates key performance indicators (KPIs) and visual analytics into a single interface, allowing executives to monitor business performance across multiple dimensions such as occasions, products, categories, locations, months, and order timing.

Business Objective

The primary objective of this project is to:

- Monitor overall sales and revenue performance.
- Identify high-performing products and categories.
- Analyze customer purchasing trends across occasions and festivals.
- Evaluate geographical revenue distribution.
- Measure delivery performance and customer spending patterns.
- Support strategic decision-making through interactive filtering and visualization.

Key Performance Indicators (KPIs)

1. Total Revenue

₹35,20,984

Represents the total revenue generated from all orders during the selected period.

Business Value:

- Measures overall financial performance.
 - Helps track growth and profitability trends.
-

2. Total Orders

1000 Orders

Displays the total number of successfully placed orders.

Business Value:

- Indicates customer demand.
 - Helps assess order volume and operational capacity.
-

3. Average Delivery Time

5.53 Days

Shows the average time taken to deliver customer orders.

Business Value:

- Evaluates logistics efficiency.
 - Helps improve customer satisfaction through timely deliveries.
-

4. Average Spend Per Order

₹3,520.98

Represents the average value spent by customers per transaction.

Business Value:

- Measures customer purchasing power.
- Assists in pricing and upselling strategies.

Revenue Analysis

Revenue by Occasion

The dashboard analyzes revenue generated during major gifting occasions:

- Anniversary
- Birthday
- Diwali
- Holi
- Raksha Bandhan
- Valentine's Day

Key Findings

- Anniversary contributes the highest revenue among all occasions.
- Raksha Bandhan and Holi also generate significant sales.
- Diwali records comparatively lower revenue.

Business Insight

Marketing campaigns should prioritize high-performing occasions while exploring promotional opportunities to boost sales during weaker periods.

Revenue by Month

Monthly revenue trends reveal seasonality in customer purchasing behavior.

Key Findings

Revenue peaks during:

- February
- August
- November

Revenue dips during:

- January
- April
- September
- December

Business Insight

Peak periods align with gifting seasons and celebrations. Inventory, staffing, and marketing budgets should be optimized around these months.

Revenue by Location

The dashboard compares revenue generated across multiple cities.

Top Performing Locations

- Imphal
- Kavali
- Dhanbad
- Hardwar

Lower Performing Locations

- Agra
- Chinsurah
- North Dumdum

Business Insight

High-performing locations can be targeted for expansion and premium offerings, while underperforming markets may require localized marketing initiatives.

Product Performance Analysis

Revenue by Category

The dashboard categorizes products into:

- Cake
- Colors
- Mugs
- Plants
- Raksha Bandhan Gifts
- Soft Toys
- Sweets

Key Findings

- Colors generate the highest category revenue.
- Soft Toys and Sweets are strong contributors.
- Mugs and Plants contribute relatively less revenue.

Business Insight

Businesses should focus inventory and promotional efforts on high-performing categories while reviewing the profitability of low-performing categories.

Revenue by Products

Product-level analysis highlights individual item performance.

Top Performing Products

- Magnum Set
- Quia Gift
- Dolores Gift
- Harum Pack

Moderate Performers

- Error Gift
- Deserunt Box
- Nostrum Box

Business Insight

Understanding top-selling products enables better stock management, product bundling, and targeted marketing campaigns.

Customer Behavior Analysis

Revenue by Order Hour

This visualization tracks revenue generated throughout the day based on order timing.

Key Findings

Revenue peaks during:

- Evening hours (18:00–21:00)
- Late afternoon periods

Revenue is lower during:

- Early morning hours
- Mid-morning periods

Business Insight

Peak ordering hours present opportunities for:

- Flash sales
- Push notifications
- Personalized promotions
- Advertising campaigns

Scheduling marketing activities during high-conversion hours can improve revenue generation.

Interactive Features

The dashboard includes dynamic filters that enable users to drill down into specific segments:

Date Filters

- Order Date
- Delivery Date

Occasion Filter

- Anniversary
- Birthday
- Diwali
- Holi
- Raksha Bandhan
- Valentine's Day

Benefits

- Real-time data exploration
- Comparative analysis across periods
- Faster executive decision-making
- Enhanced reporting flexibility

Business Impact

The dashboard provides significant value by:

Strategic Benefits

- ✓ Identifying revenue-driving occasions and products
- ✓ Understanding seasonal demand fluctuations
- ✓ Tracking customer purchasing behavior
- ✓ Monitoring delivery performance
- ✓ Evaluating regional market performance
- ✓ Supporting inventory and supply-chain planning

- ✓ Improving marketing campaign effectiveness
 - ✓ Enabling data-driven decision-making
-

Conclusion

The FNP Sales & Revenue Analytics Dashboard successfully delivers a 360-degree view of business performance by integrating revenue, orders, delivery metrics, product analytics, customer behavior, and geographical insights into a single interactive platform. With total revenue exceeding ₹35.2 lakh across 1000 orders, the dashboard empowers management to identify growth opportunities, optimize operational efficiency, and enhance customer satisfaction through informed, data-driven decisions.

This solution serves as a powerful executive reporting tool that supports both strategic planning and day-to-day business monitoring, ultimately contributing to improved profitability and business growth.
